

KEISER STRENGTH

A400 BIAXIAL UPPER BACK

Model 2035

UPPER BODY MACHINES

KEISER® ENGINEERING
HUMAN PERFORMANCE™

ROW YOUR WAY

Specifically designed to isolate the upper back, the A400 Biaxial Upper Back differs from anything else. It guides you through a range of motion that optimizes the effect on all of the muscles of the upper back. It's unilateral movement promotes symmetry by preventing the strong side from helping the weaker side. Unlike conventional machines that use iron, the A400 Biaxial Upper Back's low-inertia design gives you a smooth resistance. And it's perfect for people at any fitness level.

KEISER DYNAMIC VARIABLE RESISTANCE

Keiser's **Dynamic Variable Resistance** is designed to provide a smooth consistent Variable Resistance force curve at any training speed. Each machine has its own unique Variable Resistance curve designed and tuned perfectly for the muscles being used in that particular exercise. For users, this means that working out any speed, you'll always be training at maximum efficiency.

FEATURES

- Unique axis of rotation allows greater range of motion in natural planes of movement
- Smooth Keiser **Dynamic Variable Resistance**
- Fully adjustable to accommodate a wide range of users
- Durable construction engineered for years of use
- Large digital display with resistance and counted repetitions

SPECIFICATIONS

HEIGHT: 64" / 1626 mm

WIDTH: 51" / 1295 mm

DEPTH: 48" / 1219 mm

WEIGHT: 244 lbs / 111 kg

RESISTANCE:

0 - 356 lbs / 0 - 161 kg
